

# MPLAYER : Activity

- Project aim:
  - No specific aims, but 4031 commits.
  - Users/developers add features as and when they need them.
  - Currently adding dvd menu support. mplayer has forked libdvdnav.
  - mplayer supports a huge range of multimedia formats, with more being added all the time.

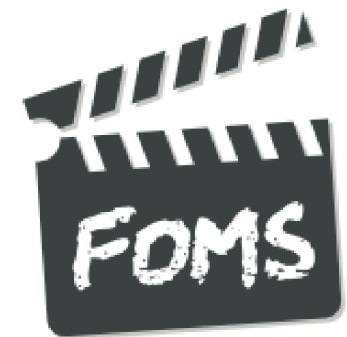

# MPLAYER : Challenges

- The biggest problem MPlayer faces is its lack of design.
- but that's ok, because most of the multimedia content mplayer has to play is not designed well either, and requires horrible dependencies between the layers.
- Too many developers!

# MPLAYER : Dependencies

- Libraries in use:
  - Many different ones.
  -
- Projects that depend on us:
  - Mencoder and therefore video editing applications.

# MPLAYER : Next Steps

- <this is what you're planning to do next>
- <concrete goals & objectives>
- ...
- blah
